The enzyme catalyses the conversion of GDP-D-mannose to GDP-L-galactose. The enzyme can be modified, and used to produce transgenic microorganisms, which can be used in fermentation techniques to produce vitamin C (ascorbic acid, L-ascorbic acid). The enzyme is modified to increase its action. Other ascorbic acid) athway enzymes which may be used in the method of the invention include hexokinases, glucose phosphate isomerases, phosphomannose isomerases,

                                                                                                                                                                                                   The present invention provides the protein and coding sequences of the Arabidopsis thaliana GDP-4-keto-6-deoxy-D-mamnose-3,5-epimerase-4-reductase. The sequence can be used for the efficient production of GDP-1-fucose, which is essential to the production of functionally important sugar chains containing 1-fucose. The present sequence is the

phosphomannomutases, GDP-D-mannose pyrophosphorylases, GDP-D-mannose:GDP-L-galactose epimerases, GDP-L-galactose phosphorylases, L-galactose dehydrogenases, and L-galactose-1-P-phosphatases, L-galactose dehydrogenases, and L-galactono-gamma-lactone dehydrogenases. The methods can be used for the production of ascorbic acid or esters using microorganisms or plants.

This invention relates to nucleic acid molecules AAH88796
isolated from Physcomitrella patens (a moss), which encode carbohydrate
metabolism related proteins (CMRP) represented in AAM0022 - AAM00110.
Continued in the invention is a vector containing the CMRP cDNA, and a
continued in the invention is a vector containing the CMRP cDNA, and a
correlation or Brevibacterium, moss or algae or a plant cell) is
correlated producing a fine chemical such as carbohydrates, cofactors
and/or enzymes. The nucleic acid molecules are suitable for modifying a
carbohydrate production system in a host, e.g. microorganisms and
carbohydrate production system in a host, e.g. microorganisms and
carbohydrate production system in a host, e.g. microorganisms and
carbohydrate production system in a host, e.g. microorganisms and
carbohydrate production system in a host, e.g. microorganisms and
carbohydrate production system in a host, e.g. microorganisms and
cuther species which are useful to modify the biosynthesis of starch,
cell wall polysaccharides and sugars. The nucleic acid molecules may be
cutilised in the genetic engineering of Corynebacter xylinum and the
contained in the sequencing of the CMRP cDNA sequences of the invention.

contained altered activities which indirectly impact the production of one
contained in the sequencing of the CMRP cDNA sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     415

The present sequence represents one of eight open reading frames (ORFs) of a novel polynucleotide sequence designated "GS". GS is a pathogenecity island of 8 kb of DNA comprising a core region of 5.75 kb with multiple ORFs and an adjacent transmissable element of 2.5 kb. The ORFs, and also the transmissable element of 2.5 kb. The ORFs, and also pathogenecity, such as providing receptoris for cellular recognition. GS was discovered and characterised using differential DNA analysis also been identified in Mycobacterium paratuberculosis and it has also been identified in Mycobacterium avium subspecies silvaticum. These pathogenic mycobacteria cause chronic inflammation of the intestine and crohn's disease in humans. The protein products of the ORFs of GS can be mycobacterial mycobacterial or for diagnosing, treating or preventing mycobacterial or for diagnosing, treating or preventing inflammatory disease. In particular they can be used as vaccines for inflammatory disease such as Crohn's disease or sarcoidosis in humans or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            104 reseccerekresessesrissreserrekeserrekrestakstrassrringassessesses 163

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1934
an adjacent transmissable element of 2.5 kb. The ORFs, and also the transmissable element, encode proteins which may be linked to pathogenecity, such as providing receptors for cellular recognition. GS was discovered and characterised using differential DNA analysis technology. It is found within Mycobacterium subspecies silvaticum. These pathogenic mycobacteria cause chronic inflammation of the intestine and Crohn's disease in humans. The protein products of the ORFs of GS can be used for detecting mycobacteria or for disagnosing, treating or preventing mycobacteria or for disagnosing, treating or preventing mycobacterial disease. In particular they can be used as vaccines for inflammatory diseases such as Crohn's disease or sarcoidosis in humans or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           328

GS is a pathogenecity island of 8 kb off DNA comprising a core region of 5.75 kb with multiple ORFs and an adjacent transmissable element of 2.5 kb. The ORFs, and also pathogenecity, such as providing receptors for cellular recognition. GS was discovered and characterised using differential DNA analysis technology. It is found within Mycobacterium paratuberculosis and it has also been identified in Mycobacterium paratuberculosis and it has also been identified in Mycobacterium paratuberculosis and it has pathogenic mycobacteria cause chronic inflammation of the intestine and used for detecting mycobacteria or for diagnosing, treating or perventing mycobacteria. They protein products of the ORFs of GS can be used for detecting mycobacterial or for diagnosing, treating or perventing mycobacterial in particular they can be used as vaccines for the language of the order of the control of the inflammator diseases un paratural they can be used as vaccines for the order of the o

GS is a pathogenecity island of 8 kb of DNA comprising a core region of 5.75 kb with multiple open reading frames (ORFs) and an adjacent transmissable element of 2.5 kb. The ORFs, and also the transmissable element, encode proteins which may be linked to be pathogenecity, such as providing receptors for cellular recognition. GS was discovered and characterised using differential DNA analysis technology. It is found within Mycobacterium avium subspecies silvaticum and it has also been identified in Mycobacterium paratuberulosis. These pathogenic mycobacteria cause chronic inflammation of the intestine and crohn's disease in humans. The protein products of the ORFs of Gs can be used for detecting mycobacteria or for disgnosing, treating or preventing mycobacterial disease. In particular they can be used as vaccines for inflammatory diseases such as Grohn's disease or sarcoidosis in humans or Johne's disease in animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              w isolated pathogenicity island from mycobacteria - used to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              monitoring.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=6294328B1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen. Mycobacterium tuberculosis or related Mycobacterium by determining the nucleotide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 1551 (AAL199683) and H37Rv (AAL99682). The method is useful for evaluating strain variation of m. tuberculosis and has valuable application in the fields of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Evaluating strain variation of Mycobacterium tuberculosis, comprises determining the nucleotide sequence of the strain at positions in the genome corresponding to positions where M. tuberculosis strains CDC 1551 and H37Rv differ -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     rcreacearceacceacerrceacrregirerceaerceaeceaeceaegrear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TGGTGTCAATCTCCAGATTCAGACCAATGTGATCCACTCTGCATATGAGCACGGTGTGAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          725
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     785
                                                                                                                                                                                                                                                                                                 65
using a bacterial artificial chromosome (BAC) vector. Recombinant BAC vectors, which are preferably immobilised, can be used to detect mycobacterial nucleic acids (genomic DMA, cDNA or mRNA) in biological samples. The polymucleotides identified are useful as probes or primers for detecting a given mycobacterium of interest. By aligning the polymucleotides identified are useful as probes or primers polymucleotides contained in the recombinant BAC vectors it is possible to physically map a polymucleotide of mycobacterial origin in a biological sample. The methods and vectors from the present invantion are useful in providing information for combating tuberculosis. It is possible to compare genomes between different strains or species and their non-pathogenic strains or species counterparts. ABQ62492 to ABQ6328 and ABB81230 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GCTTCCTGCTCTTATGAGGAGGTTCCACGAGGCGAAAGTGAATGGAGCGGAGGAAGTTGT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               66 CCGCAAGCTTCAGGAACAAGGTTTCACCAATCTCGTTCTTAAAACACACGCCGAGCTTGA 125
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=6294328B1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          65
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen. Mycobacterium tuberculosis or related Mycobacterium by determining the nucleotide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 1551 (AA199683) and H37Rv (AA199682). The method is useful for evaluating strain variation of M. tuberculosis and has valuable application in the fields of tuberculosis genetics, epidemiology, patient treatment and epidemic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 4411529 BP; 758565 A; 1449983 C; 1444602 G; 758379 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1704120 TGACCGCGCGCGCGCGTCTACATCGCCGGGCATCGCGGCCTGGTCGGGTCCGCGCTGCT

The present invention also describes a method of detecting the presence of E. coli of a particular H serotype in a sample, comprising specifically hybridising a nucleic acid, preferably at least a pair, derived from a flagellating gene, specific for a particular flagellin gene associated with the H serotype, to any E.coli in the sample which contain the gene, and detecting any hybridised molecules, identifying the presence of that serotype in the sample. (I) are useful for: (1) detecting the presence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       a]]

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            561
                                                                                                                                                                                                                                                                                                                           This is the nucleotide sequence of a gene cluster involved in the biosynthesis of the Escherichia coli 0157 0 antigen. The gene cluster was obtained by PCR amplification of E. coli 0157:47 strain (C664-1992) DNA using primers (see AANG6752-63) based on 0 antigen gene sequences. 12 Open reading frames within the gene encode proteins (see AAN8313-23) involved the sequences. The genes encode proteins (see AAN8313-23) involved the synthesis of sugars present in the polysaccharide or oligosaccharide the transport or processing of polysaccharide or oligosaccharide units. The use of nucleic acid molecules derived from particular assembly and transport genes, particularly wad (transferase), wzx (flippase) and wzy (polymerase) genes, within O antigen gene clusters improves the specificity of methods for the detection and identification of O antigens, e.g. in tests of food- or faecaldentived samples, or samples from patients. The O antigen is a major virulence factor of enteropathogenic E. coli strains that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             81
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         7807 Gregeaggratititagcraacagrictrarccrecegarititararargagaararaarg

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              774
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TITGAAGGGAAGCTTGGATTGCACTAAGCCAGATGGCACCCGAGGAAACTTATG 834
                                                                                                                                                                                                                              81
of E. coli of H serotype in a sample by hybridising at least one or a pair of (1) to any E. coli in the sample and detecting the hybridised nucleic acid molecules, and (2) for detecting the presence of both O and H-serotypes of E. coli by hybridising at least one or a pair of (1) to any E. coli present in the sample and detecting the hybridised nucleic acid molecules. (1) is particularly useful for detecting the combination of O and H antigen. Hybridised (1) when using at least one (1) is detected by southern blot analysa and, when using a least one is detected by polymerase chain reaction (PCR). AAZ56399 to AAZ56420 represent primers used in the exemplification of the present invention.

NGR234. Open reading frames (ORF) derivable from the nucleotide sequence are claimed. The nucleotide sequences or ORFs can be used e.g. in the transportation of compounds to and from an organism which is a host to at least one of the nucleotide sequences. ORFs or proteins, the degradation and/or metabolism of organic, inorganic, natural or xenoblotic substances in a host organism or the modification of the host range, nitrogen fixation abilities; for obtaining a symbicic minimal set of ORFs required for functional Rhizobium-legume symbiosis, especially for nodulation efficiency on host plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ATTIGGGICGCAGACACAAAGGIAIGGICGCCAGCGCCCAIAAITCGAICGCIIGCCICC 6028
